That’s right, this half-blood Brahman steer cleared a profit of $107.19, and so did 210 of his pen mates recently fed at Great Plains Cattle Feeders during one of the coldest winters in the Texas Panhandle. These steers, sired by registered Brahman bulls, are part of new data proving that Brahman cattle are performing just as well in the feedlot and on the rail as they do in the pasture. Isn’t it time you added Brahman influence to your herd? Call the ABBA today for more information about the #1 beef breed for efficiency and crossbreeding’s common denominator — American Brahman!
